

How My Project Works

A short, plain-language report. Explain your fraud system the way you'd explain it to a friend who isn't a programmer.

The rules of this report: no more than **3 pages** · **no code, no jargon** — plain English · aim for about **150 words per question**. Replace each  prompt with your own words and delete the prompt.

Name	_____	Student ID	_____
Date	_____	Class	_____

1 • What does your project do?

 In two or three sentences: what problem does the system solve, and who would use it? (Think: a bank wants to catch suspicious money transfers.)

Write here...

2 • How does it work, from start to finish?

 Tell the story of one suspicious transaction: it arrives, the system notices something is off, it opens a “case,” a person reviews it, and the case ends up closed. Walk through it in order, in plain words.

Write here...

3 • What are the main parts, in everyday terms?

 Describe the pieces without technical names: the place everything is stored, the part that checks for suspicious activity, the screen people use, and the sign-in. One sentence each — use an analogy if it helps.

Write here...

4 • What makes a transaction look suspicious?

 Explain the checks your system makes in plain language — for example “a very large amount,” “too many transfers too quickly,” or “sending money to a flagged name.” Why does each one matter?

Write here...

5 • Who uses it, and how does a case move along?

 Describe the people (e.g. an analyst, an investigator) and what each is allowed to do. Then describe the stages a case passes through and who moves it from one stage to the next.

Write here...

6 • What was hard, and what would you improve?

🖋 Be honest: what part was tricky to get working, and if you had another week, what is the one thing you'd add or make better?

Write here...
